

FREEJET 330UV

Introducing The All New:

FreeJet 330UV Promo Printer
Fast, Reliable, No Clog System.

FREEJET 330UV

*Adjustable Plattens
For Easy Use*

Single Pass Printing

Two pass print routines are a thing of the past. With simultaneous white and color pass technology print speeds are dramatically increased.

Wet Capping

Only FreeJet printers offer the industry break through no clog "Wet Cap" system. This fully integrated system always keeps the print head clean and prevents drying of the ink channels while the printer is idle. This tried and true system allows us to offer you the best print head warranty in the industry.

White Ink Circulation

With a white ink circulating ink delivery system you no longer need to worry about clogged ink tubes and print heads. Keeping the white ink moving keeps the ink fresh and ready to go without wasting ink to acquire a good white.

UV- LED Technology

With UV-LED technology you can print vibrant full color onto a large range of substrates. Print on anything from plastic and metal to wood, ceramics and glass. This is the perfect solution for almost all promotional product items. Prints are fast and cured instantly.

No Dry Times

One of UV-LED's virtues is that it has no dry time or need for heat or heat presses. With one pass on the FreeJet's dual LED lamps during printing your ink is cured. When the printing has finished you also have a finished product.

Eco UV-Led Inks

As the world moves forward the demands for cleaner inks are necessary. Our eco UV-Led inks are 100% VOC content free. Combined with the best color range and vibrancy this gives you the best of both worlds.

Bulk Ink System

Because all FreeJet printers use an industrial "bulk ink system" your ink cost is much lower. Lower ink costs give you higher profit margins, that makes everyone happy.

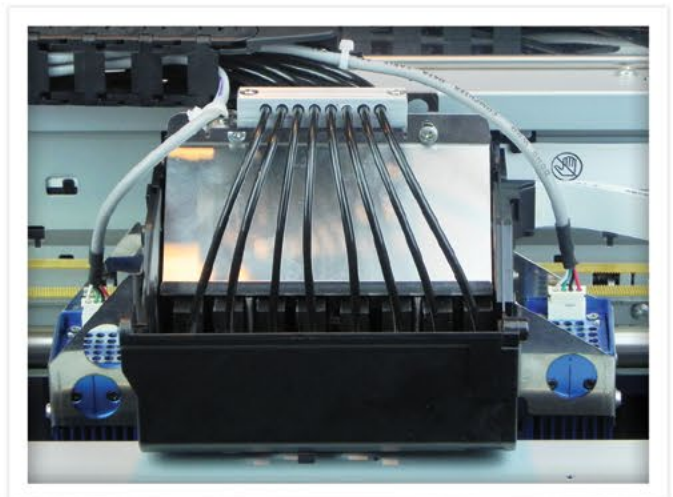

Direct RIP

Built from the ground up Direct Rip gives you fast and easy image set up. Even with its advanced functions getting the best looking prints are a breeze. No longer do you need to waste ink and time trying to dial in your prints.

Fastest UV Printer

Most UV-LED printers today have slower print speeds due to the single lamp and uni directional print passes. We decided to break the mold by adding a second lamp for the cure while print process. This now allows us to print in a bi directional mode drastically increasing print speeds to the fastest in its class.

Print Height

With such a large range of substrates to print on you need to have a range of clearance for each item. The up to 5" height adjustment provided gives you room to print on almost anything.

Print Area

Bigger print areas mean more production. At 13" x 22" our huge printable area allows you more versatility. The print table also has a vacuum option for those jobs that just need to be held down. Simply add a pump and you now have a full vacuum table

Technical Specifications

FreeJet Model	FreeJet 330UV
Printing Method	Direct to Substrate UV LED
Print Head Technology	Ink Jet Piezo Drop on Demand
Maintenance	Wet Cap No Clog System Included
Dimensions	25 W x 44L x 18D
Print Direction	Bi - Directional High Speed
UV Lamp	2 on board
Print Speed	Approx 45 sec 1440x720
Interface	USB
Printing Resolution	Max 5760 dpi
Software Requirements	Windows 7™ and later, Mac using parallels
Ink Type	UV LED Direct Ink
Ink Channels	C,M,Y,K, W,W,W,W / CMYK,CMYK
Ink Supply Method	Sealed Bulk ink
Circulation	Complete White Ink Circulation (bottles/lines)
Pretreatment	No required, optional for some substrates
Voltage	AC 110/220V
Power Consumption	70VA (varies on activity) 20VA idle
Height Adjustment	Auto sensing using optical sensor up to 5 inches
Environmental Controls	Temperatures 10-25C /Humidity 50-80RH
Rip Software	Direct Rip 330UV Included
Print Area	12.79'x22"
Available Product Jigs	Pen, Golfballs,Phone Cases,bottles, Coasters and more
Printing Substrates	Glass, plastic,metal,wood,ceramic and many more
One Pass White and Color	Prints White Base and Color in the same pass.
